Combinatorics is mathematics of enumeration, existence, construction, and optimization questions concerning finite sets. This text focuses on the first three types of questions and covers basic counting and existence principles, distributions, generating functions, recurrence relations, Pólya theory,

combinatorial designs, error correcting codes, partially ordered sets, and selected applications to graph theory including the enumeration of trees, the chromatic polynomial, and introductory Ramsey theory. The only prerequisites are single-variable calculus and familiarity with sets and basic proof techniques. The text

emphasizes the brands of thinking that are characteristic of combinatorics: bijective and combinatorial proofs, recursive analysis, and counting problem classification. It is flexible enough to be used for undergraduate courses in combinatorics, second courses in discrete mathematics, introductory graduate

courses in applied mathematics programs, as well as for independent study or reading courses. What makes this text a guided tour are the approximately 350 reading questions spread throughout its eight chapters. These questions provide checkpoints for learning and prepare the reader for the end-of-section exercises of

This title is edited by a British author from chapters written by cardiologists working in the UK. This handbook - which has

been formally adopted by the Royal Brompton and Harefield NHS Trust - is a homunculus of cardiology knowledge, based on the experience of the authors with the sole aim of helping the reader make a decision when faced with the daily challenges of cardiology. Living in an age where access to the latest trial data is

immediate, for many people lack of knowledge is not the problem, instead it is inadequate experience that holds them back from making a decision based on that knowledge. The Editor calls this 'evidence based paralysis'- sometimes you don't want to know what a group of experts decided in the latest trial but simply want

to know what to do next. Obviously there is no substitute for experience but to help you along the way this book will help you 'get off the fence' and indicate what the authors have done in similar situations.
