What is the Difference Between Hydraulic Oil and Engine ...

In most force-fed lubrication systems (diesel engines), the filter is located after the pump and before the critical machine components. This location poses several problems for the filter. It is to be noted that the location of the filter is at the engine inlet (after the pump) for diesel engines (or) simply on the pressure side of the pump. Whereas in hydraulic systems, the filters are usually located on the return line of the system. Thus the location of a filter on the particular system ...

The debate about chainsaws and using cheaper regular motor oil as the chain/bar lubricant is not completely resolved. Most chainsaw operation manuals insist that you need to use quality bar oil. The reason is that bar and chain oil has a "high-tack" additive that prevents it from slinging off the chain as it travels around the tip.
