the diseases carried by ticks--known as tick-borne diseases--can cause severe pain, fatigue, neurological problems, and other serious health problems. The Institute of Medicine held a workshop October 11-12, 2010, to examine the state of the science in Lyme disease and other tick-borne diseases.

Greek sculpture changed radically in the early classical period, becoming much more lifelike. At the same time physicians such as Hippocrates were developing new ideas about human life and health, and philosophers were rethinking their

Sculptors and Physicians in Fifth-Century Greece is an investigation of how sculptors, physicians, and philosophers interacted at a time crucial to the formation of classical art.

Polykleitos of Argos, who flourished between 450 and 420 BC, is one of the most celebrated sculptors of classical Greece. A philosopher and theoretician as well as a sculptor, Polykleitos sought to capture in his statues the ideal proportions of the human body, and his work was frequently copied by later artists. This richly

illustrated volume of superb essays by art historians, classical scholars, and archaeologists discusses Polykleitos' life and influence, his intellectual and cultural milieu, and his best-known work, the Doryphoros, or "Spearbearer." Polykleitos, the Doryphoros, and Tradition displays an impressive range of approaches, beginning with commentary on the artistic and philosophical antecedents that influenced Polykleitos' own aesthetic, as well as the role of contemporary Greek anatomical knowledge in his representation of the human

form. Many of the essays offer extended analysis and detailed illustration of his surviving sculptures, later copies of his work, and reflections of his style in sculpture, paintings, coins, and other art in Greece, Italy, and Asia Minor. Several essays offer an extended discussion of Polykleitos' original bronze Doryphoros, its pose, its relation to other spearbearer sculptures, and the fine Roman marble copy of it now at the Minneapolis Institute of Arts. The volume as a whole is a visually and intellectually appealing work that will interest not only

worldwide adoption. The book assembles contributions from renowned world leaders in activated sludge research, development, technology and application. The objective of the book is to summarise the knowledge of all aspects of the activated sludge process and to present and discuss anticipated future developments. The book comprises invited papers that were delivered at the conference "Activated Sludge...100 Years and Counting!", held in Essen, Germany, June 12th to 14th, 2014. Activated Sludge - 100 Years and Counting is of interest to researchers, engineers, designers,

The increase in suicides among military personnel has raised concern. This book reviews suicide epidemiology in the military, catalogs military suicide-prevention activities, and recommends relevant best practices.

Havelock's book takes a much-needed new look at some of the most famous icons of Western art: the nude statues that the Greeks produced to represent Aphrodite. The Aphrodite of Knidos, by master sculptor Praxiteles, is the leading example of this form. Other statues include the Capitoline and Medici Venuses, the Crouching Aphrodite and the Aphrodite of Melos--all of them indebted to Praxiteles. The author analyzes the meaning of the pose of the Aphrodite of Knidos, the significance of her nudity, and her architectural setting. A survey of the statue's

reception and interpretation in Greek, Roman, and modern times offers an entirely new perspective on this major work of art. Among topics examined are Praxiteles' reported use of his mistress Phryne as his model, the "pudica gesture," and the importance of small-scale versions of statues for dating the larger sculptures. The author also considers the function and religious significance of the small statues, and she includes the cultural context offered by the erotic poetry of Propertius and Ovid, two Roman poets who were fascinated by the robing and disrobing of

their mistresses. The Aphrodite of Knidos is a highly readable, broad-based volume of interest to anyone familiar with classical art and the ancient world.

Christine Mitchell Havelock is Professor Emerita of Art History and Curator of the Classical Art Collection at Vassar College. She has written and lectured widely on Greek art.

The Springer Handbook of Auditory Research presents a series of comprehensive and

synthetic reviews of the fundamental topics in modern auditory research. The volumes are aimed at all individuals with interests in hearing research including advanced graduate students, postdoctoral researchers, and clinical investigators. The volumes are intended to introduce new investigators to important aspects of hearing science and to help established investigators to better understand the fundamental theories and data in fields of hearing that they may not normally follow closely. Each volume is intended to present a particular topic

comprehensively, and each chapter will serve as a synthetic overview and guide to the literature. As such, the chapters present neither exhaustive data reviews nor original research that has not yet appeared in peer-reviewed journals. The volumes focus on topics that have developed a solid data and conceptual foundation rather than on those for which a literature is only beginning to develop. New research areas will be covered on a timely basis in the series as they begin to mature. Each volume in the series consists of five to eight substantial chapters on a particular topic. In

some cases, the topics will be ones of traditional interest for which there is a substantial body of data and theory, such as auditory neuroanatomy (Vol. 1) and neurophysiology (Vol. 2). Other volumes in the series will deal with topics which have begun to mature more recently, such as development, plasticity, and computational models of neural processing.

subject. The leading space agencies: the European Space Agency (ESA) as well as NASA, the American Space Agency, have planned missions that will elucidate some of the still unknown questions underlying research in the origin of life. New results are surpassing our ability to keep well informed: the reviews that we were presented at the Trieste meeting will bring the readers of this well-documented and timely book up to date in this fast-moving area. There was particular interest in the status of the experiments that will take place inside the atmosphere of Titan, the large satellite, which is a testing ground for the theories and experiments in the field of chemical evolution.
