With an afterword by Natasha Wimmer. Winner of the Herralde Prize and the Rómulo Gallegos Prize. Natasha Wimmer's translation of The Savage Detectives was chosen as one of the ten best books of 2007 by the Washington Post and the New York Times. New Year's Eve 1975, Mexico City. Two hunted men leave town in a hurry, on the desert-bound trail of a vanished poet. Spanning two decades and crossing continents, theirs is a remarkable quest through a darkening universe - our own. It is a journey told and shared by a generation of lovers, rebels and readers, whose testimonies are woven together into one of the most dazzling Latin American novels of the twentieth century.

Analyzes Derrida's 1975 seminar "La vie la mort" as a deconstruction of biology with relevance to his work more broadly. In Biodeconstruction,Francesco Vitale demonstrates the key role that the question of life plays in Jacques Derrida's work. In the seminar La vie la mort (1975), Derrida engages closely with the life sciences, especially biology and evolution theory. Connecting this line of thought to his analysis of cybernetics in Of Grammatology, Vitale shows how Derrida develops a notion of biological life as itself a sort of text that is necessarily open onto further articulations and grafts. This sets the stage for the deconstruction of the traditional opposition between life and death, conceiving of death as an internal condition of the constitution of the living rather than being the opposite of life. It also provides the basis for the deconstruction of the rigidly deterministic concept of the genetic program, an insight that anticipates recent achievements of biological research in epigenetics and sexual reproduction. Finally, Vitaleargues that this framework can enrich our understanding of Derrida's late work devoted to political issues, connecting his use of the autoimmunitarian lexicon to the theory of cellular suicide in biology. "This book is extremely interesting and engaging, and provides a very original and timely perspective on Derrida's work. Its greatest strength is bringing together Derrida's 'deconstruction' in his analysis of the life sciences under the heading of 'biodeconstruction.' This term is simple but ingenious, and captures beautifully the material dimension of Derrida's work." - Nicole Anderson, author of Derrida: Ethics Under Erasure

Like Dickens, Saratchandra had a bag of wonderful tales"- The Hindu The Final Question (Shesh Prashna) is one of Saratchandra Chattopadhyay's last novels and perhaps his most radically innovative. The novel caused a sensation when it was first published in 1931, drawing censure from conservative critics but enthusiastic support from general readers, especially women. The heroine, Kamal, is exceptional for her time. She lives and travels by herself, has relationships with various men, looks poverty and suffering in the face, and asserts the autonomy of the individual being. In the process, she tears apart the frame of the expatriate Bengali society of Agra, where she lives. Through Kamal, Saratchandra questions Indian tradition and the norms of nationhood and womanhood. The Final Question transcends time and will appeal to readers of all ages. Translated by Department of English, Jadavpur University.

Since long before computers were even thought of, data has been collected and organized by diverse cultures across the world. Once access to the Internet became a reality for large swathes of the world's population, the amount of data generated each day became huge, and continues to grow exponentially. It includes all our uploaded documents, video, and photos, all our social media traffic, our online shopping, even the GPS data from our cars. "Big Data" represents a qualitative change, not simply a quantitative one. The term refers both to the new technologies involved, and to the way it can be used by business and government. Dawn E. Holmes uses a variety of case studies to explain how data is stored, analyzed, and exploited by a variety of bodies from big companies to organizations concerned with disease control. Big data is transforming the way businesses operate, and the way medical research can be carried out. At the same time, it raises important ethical issues: Holmes discusses cases such as the Snowden affair, data security, and domestic smart devices which can be hijacked by hackers. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiam to make interesting and challenging topics highly readable.

The extraordinary true story of how an iman's daughter escaped her abused childhood, and an honor killing by her strict Muslim family, to find freedom - and love.

We know we need to eat better. We know we should be more active. And we know we should be living an all around healthier lifestyle. So why is it so hard to stick to our diet and exercise efforts when we want to lose weight and take back control of our health? Is there a better way to succeed in our health and fitness goals? 'Heavy Brain' is the new release from the MetFlex-Rx Diet creators Tommy Caldwell and Dr.Laura Caria, M.D., and inside the pages of their new book they address how the mind is the root of all fitness failure. This eye opening book teaches the reader how to address and correct foundational issues in the way we think about our health. A task that must be accomplished in order for your diet and exercise efforts to 'stick' and give you long term results. Caldwell and Caria argue that the automatic thought patterns we do not address when trying to lose weight are the true root of the unhealthy habits and behaviours (overeating, snacking, technological distractions, and laziness for example) that we can't seem to gain control over and the real cause of most repeated fitness failures and weight problems. The formula for success that the pair of authors teach inside 'Heavy Brain' is quickly changing the face (and success rate) of the weight loss industry. With insightful weight loss principles and simple step by step instructions for how to set yourself up for life-long success, Heavy Brain may just be the last 'diet' book you ever have to read.

'I squeezed through the narrow gap and out into the hallway and I stood for a moment, unable to decide where to go. Should I make a dash for the kitchen, where my mother would be swigging from a bottle? Or should I run upstairs and try to find somewhere to hide? It was a choice I didn't really need to make, because there was no escape' Anna Lowe grows up on the doorsteps of pubs, waiting for her mum to come out. Having to give up her bedroom to her mother's drunken friends. And regularly calling out the ambulance, after finding her mother unconscious and covered in vomit. But it is when they move in with her mother's boyfriend Carl that things take the ugliest turn. Not only is he violent with her mother, but he also sexually abuses Anna from the age of six - destroying any semblance of normal childhood she had left. Wake Up, Mummy is the heartbreaking true story of a little girl who eventually found the courage to break free from the past.

The best-selling poet of HER & HER Vol. 2 returns with a different voice, on a different path, but with the same mission. HIM is a collection of 'he-poetry' in a world of 'she-poems' that tends to only refer to him when speaking ill. Through poetry and prose, Pierre wears his heart on paper and pens a tribute to men: their undelivered feelings, unrecognized strength, their loud silence, and their neglected complaints. HIM celebrates good men, their love, their worth, and their beauty. The characteristics that often fall into the shadows are now brought to life.

A young boy is worried about what will happen to his body when he hears such expressions as "I'm tongue-tied," "don't give me any of your lip," and "I put my foot in my mouth."
