temperatures for the placement and curing of masonry mortar is the range of  $70^{\circ}\text{F} + 10^{\circ}\text{F}$ .

In cold weather (40 degrees Fahrenheit and below) mortar materials need to be heated, otherwise the mortar is likely to exhibit slower setting times and lower early strengths.

Masonry work requires special attention when working temperatures are below 40 F. Very cold weather changes the behavior of mortar and can lead to cracking and other problems. Masons must act promptly and follow special steps to keep masonry warm and workable.
