Resource recovery is using wastes as an input material to create valuable products as new outputs. The aim is to reduce the amount of waste generated, thereby reducing the need for landfill space, and optimising the values created from waste. Resource recovery delays the need to use raw materials in the manufacturing process. Materials found in municipal solid waste, construction and demolition waste, commercial waste and industrial wastes can be used to recover resources for the manufacturing o

Waste Management and Resource Recovery - Charles R. Rhyner ...

Resource Recovery. When we talk about resource recovery, it is related with solid waste management. Solid wastes and their collection, disposal, treatment need to be done in a way in which pollution to the environment can be prevented but also, resources can be recovered to as much extent as possible. Initial days of civilization, thoughts were given to proper collection and allocating areas whereby the solid wastes of society could be collected and processed under hygienic conditions.

Resource Recovery - Waste Management

Resource Recovery from Waste is a collaborative research programme engaging academia, industry, government and the general public to develop knowledge and tools to reduce pressure on natural resources and create value from wastes. It was set up to deliver the environmental science needed to support a radical change in the waste management landscape.
