RNA and Protein Synthesis is a compendium of articles dealing with the assay, characterization, isolation, or purification of various organelles, enzymes, nucleic acids, translational factors, and other components or reactions involved in protein synthesis. One paper describes the preparatory scale methods for the reversed-phase chromatography systems for transfer ribonucleic acids. Another paper discusses the determination of adenosine- and aminoacyl adenosine-terminated sRNA chains by ion-exclusion chromatography. One paper notes that the problems involved in preparing acetylaminoacyl-tRNA are similar to those found in peptidyl-tRNA synthesis, in particular, to the lability of the ester bond between the amino acid and the tRNA. Another paper explains a new method that will attach fluourescent dyes to cytidine residues in tRNA; it also notes the possible use of N-hydroxysuccinimide esters of dansylglycine and N-methylanthranic acid in the described method. One paper explains the use of membrane filtration in the determination of apparent association constants for ribosomal protein-RNS complex formation. This collection is valuable to bio-chemists, cellular biologists, micro-biologists, developmental biologists, and investigators working with enzymes.

The classic personal account of Watson and Crick’s groundbreaking discovery of the structure of DNA, now with an introduction by Sylvia Nasar, author of A Beautiful Mind. By identifying the structure of DNA, the molecule of life, Francis Crick and James Watson revolutionized biochemistry and won themselves a Nobel Prize. At the time, Watson was only twenty-four, a young scientist hungry to make his mark. His uncompromisingly honest account of the heady days of their thrilling sprint against other world-class researchers to solve one of science's greatest mysteries gives a dazzlingly clear picture of a world of brilliant scientists with great gifts, very human ambitions, and bitter rivalries. With humility unspoiled by false modesty, Watson relates his and Crick’s desperate efforts to beat Linus Pauling to the Holy Grail of life sciences, the identification of the basic building block of life. Never has a scientist been so truthful in capturing in words the flavor of his work.

Meet Izzy Gizmo – a fabulously feisty new character from Pip Jones (Squishy McFluff, Daddy's Sandwich) brought brilliantly to life with exuberant and detailed illustrations from the best-selling illustrator of TheDetective Dog, Sara Ogilvie. Izzy Gizmo, a girl who LOVED to invent, carried her tool bag wherever she went in case she discovered a thing to be mended, or a gadget to tweak to make to make it more splendid. Izabelle Gizmo just loves to invent, but her inventions never seem to work the way she wants them to. And that makes her really CROSS! When she finds a crow with a broken wing she just has to help. But will she be able to put her frustrations to one side and help her new friend to fly again? Shortlisted for the Sainsbury's Children's Book Prize 2017, this empowering book is perfect for fans of Rosie Revere, Engineer, Fantastically Great Women Who Changed the World and Good Night Stories for Rebel Girls. 'If you're looking for a new book with a determined, strong female role model then this is for you' Being a Mummy blog 'This was such a fun book. We need more books with girl inventors!' Twirling Book Princess blog 'This exuberantly riotous story... blends the fun of rhyme with the touching friendship between a charismatic crow and a never-say-die young inventor' Lancashire Evening Post 'A lovely story of ingenuity and determination' Parents in Touch 'I doubt many will fail to fall for Izzy and her mechanical mind. Pip Jones' rhyming narrative is a cracker to read aloud and Sara Ogilvie's imagination must be almost as fertile as young Izzy's... A real riot.' Red Reading Hub blog 'Jones's loping, engaging rhymes and Ogilvie's vivacious images evoke both inspiration and frustration' The Guardian

A forgotten Haudenosaunee social song beams into the cosmos like a homing beacon for interstellar visitors. A computer learns to feel sadness and grief from the history of atrocities committed against First Nations. A young Native man discovers the secret to time travel in ancient petroglyphs. Drawing inspiration from science fiction legends like Arthur C. Clarke, Isaac Asimov and Ray Bradbury, Drew Hayden Taylor frames classic science-fiction tropes in an Aboriginal perspective. The nine stories in this collection span all traditional topics of science fiction--from peaceful aliens to hostile invaders; from space travel to time travel; from government conspiracies to connections across generations. Yet Taylor's First Nations perspective draws fresh parallels, likening the cultural implications of alien contact to those of the arrival of Europeans in the Americas, or highlighting the impossibility of remaining a "good Native" in such an unnatural situation as a space mission. Infused with Native stories and variously mysterious, magical and humorous, Take Us to Your Chief is the perfect mesh of nostalgically 1950s-esque science fiction with modern First Nations discourse.
